**How to Order Round Slings**

1. Choose the working (safe) load limit (WLL) that you require taking into consideration the lifting method to be used.
2. Select the length you require (in increments of 1.0m) round slings are measured in circumference (L2) or effective working length EWL (L1). The EWL is the length of the sling when laid flat.
3. The part number for rounding is generated as follows: RS (Round Slings, 03 (3.0 Tonne WLL), 04 (4.0 metre circumference, 2.0 metre EWL) = RS3000-4

UCUK Ref. No	Length / Weight
RS12000-1	1M 12000KG

RS12000-6	6M 12000KG
RS12000-8	8M 12000KG
RS12000-10	10M 12000KG
RS12000-12	12M 12000KG

**The Working Load Limit (WLL)**

Is established by the capacity of the sling and the mode factor. The mode factor is established by the type of lift and the  $\beta$  Angle. The  $\beta$  angle is the angle of the sling to the vertical as shown. Warning:  $\beta$  angle should never exceed 60°
